

algarid has helped many clients improve water purity, clarity, softness and quality.

algarid has lowered client costs for water contamination, maintenance and chemical treatment and also extended machinery and equipment life.

algarid protects pipe-work, valves, filters and fittings on water supply systems by inhibiting scaling, slime and algae growth.

algarid

has been effective on.....

Blue-Green affected water
Boiler water supplies
Bore water supplies
Commercial water supplies
Cooling towers
Dairies
Domestic water supplies
Fish farms
Fountains
Greenhouses
Hospital water supplies
Hydroponics
Ice making machines
Industry water supplies
Irrigation systems
Laboratory equipment
Livestock water supplies
Orchards
Swimming pools
Trickle and spray systems
Vineyards
Water-cooled machines
Water filters
Water ponds
Water treatment plants

algarid

Magnetic Water Stabilizers
www.algarid.com

algarid water stabilizers have been improving water quality world wide for more than two decades.

algarid has proven to be effective in eradicating algae and bacteria, and solving blue-green algae water problems.

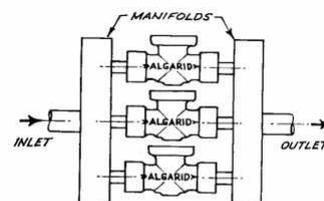

algarid also prevents calcium (scale) deposits and iron staining. It has the effect of softening water in hard water areas and reducing odour.

algarid utilizes a permanent magnetic field created by special magnetic cartridges that affect the water chemistry and changes the characteristics of mineralized nutrient contents. Changing the mineralized content reduces the problems caused by iron and calcium. Also the nutrient contents that support algae and bacteria growth are also affected.

algarid, designed in Australia and protected by world patents, has a unique structure which expose state of the art special ceramic magnetic discs directly to the water flow. This ensures maximum efficiency and optimum performance at all times with a minimum field expectancy of at least 25 years

algarid units are designed to be fully integrated in standard water pipelines, either metal or plastic, and the popular ALG05 40mm unit has threaded connections. The ALG 05 may be set up in a manifold configuration when greater flows are required.

The larger models ALG20, ALG35 and ALG80 have Table E flanged connections.

FOR LARGER THAN 1/2" CAPACITY
USE AS MANY ALGARIDS AS
REQUIRED IN CONJUNCTION
WITH MANIFOLDS.

Specifications

algarid Model	Size MM (inch)	Nominal Flow Rate		Length MM	Weight KG	Pressure Rating		Housing Material
		LT/SEC	GAL/HR			kPa	PSI	
ALG 05	40 (1½")	5	4,000	114	1.5	2068	300	BRONZE
ALGC 05	40 (1½")	5	4,000	114	1.5	2068	300	CHROME
ALG 20	80 (3")	20	16,000	432	41	2068	300	BRONZE
ALG 35	100 (4")	35	28,000	508	67	2068	300	BRONZE
ALG 80	150 (6")	80	64,000	508	141	2068	300	BRONZE

Proudly Manufactured in Australia by:
